Vector Self-Dumping Hoppers and Drum Fillers

Drum fillers provide the ability to vacuum directly into 55-gallon drums for added convenience. Often used for specialized clean up of products that you do not want to enter the vacuum, including sludge and similar gummy or noxious materials. Drum fillers are often used when it is difficult to change drums at the vacuum source due to space considerations. They are available in several configurations including with or without stands, replaceable wear sections or bin monitor sensors.

Self-dumping one, two and four cubic yard hoppers provide the ability to provide additional storage or for clean up of bulk products that the user do not want entering the vacuum. Self-dumping hoppers are often used for non-hazardous material. The self-dumping feature provides ease of handling for discharging into dump trucks, lugger boxes, and other collection or transport devices.
