## Need A Roof Vac With A Big Appetite?

WetHead® vacuuming is a process of combining high-pressure water washing with concurrent vacuuming to clean roof and other surfaces. The WetHead utilizes a patented surface cleaning apparatus to clean surfaces having both coarse and fine compacted particulate.

This is how the system works!

- Set-up your vacuum as directed in the Vector operating manual.
- Lead the high-pressure water line (1,000 - 2,000 PSI) from the WetHead power module to the work area.
- Remove ballast with the vacuum tool of choice.
- Connect the WetHead nozzle to the vacuum line.
- Connect the high-pressure water line to the WetHead nozzle.
- Clean the deck with the WetHead nozzle.

### WetHead Components

Nozzle with Cart

High-Pressure Wash System  
25 HP Gas Engine, 1,650 PSI  
Pump Capable of 10 GPM, 50  
Gallon Fresh Water Tank.
