HDD™ Vacuum Excavator Series **AHEAD OF THE COMPETITION AND BLAZING THE TRAIL!**

HDD Vacuum Excavators have more features and our systems are better executed.

We offer the best optional dry filtration package available. While everyone offers the same blowers, engines and accessories, Vector has included the little things that others missed. This makes our systems safer, easier to use and more dependable. We did not just jump into the excavation market. Vector let others blaze the trail. Our water pumps come with clutches so they do not run continuously. Our machine shuts down automatically only when fully filled, rather than when $\frac{3}{4}$ filled. Our tailgate is easier to open and the internals will not rust out. Our trailers do not crack. Our machines do not have exposed belts or water pumps. Also, we are contractor driven, so we have avoided the features that “sound good” but do not work in the real world job-site.

Vector Technologies designs and builds its HDD Vacuum Excavator series.

For over 35 years, Vector has been the leading manufacturer of trailer mounted vacuum systems. HDD Vacuum Excavators feature the same rugged construction, quality, and tested in-field performance of all Vector vacuum products.

HDD Vacuum Excavators are built to last. Many Vector vacuums built in the 1970's are still on the job.

Vector HDD Vacuum Excavators feature proven technology mated with superior design, exceptional welding and painting. And its rugged components ensure that the system stands up to the test of construction jobs.

Best Warranty in the Industry.

Our confidence is exhibited by our warranty, the industry's best, which includes three-years structural warranty on trailer, and eighteen months, or 2000 hours on the blower and engine.

HDD Vacuum Excavators are safe.

Units feature fully enclosed locking Power Modules for operating safety. Access to the machine is limited to the operators' panel while the unit is running. Systems feature an emergency shut down system. The vacuum tailgate locks so the access to the spoils tanks is controlled during non-working hours.

HDD Vacuum Excavators are more compact and designed to maneuver better.

Vector has been in the business far longer than the competition. We have learned our lessons. Frankly, our designs are better and more compact.

HDD Vacuum Excavators are easier to unload.

Our water and airtight sealing Quick Dump™ vacuum tailgate features a full open door & no internal mechanisms to bind or jam. The Spoils tank cleans easier since our cyclonic entry does not pack material into the back of the spoils tank. A Klean Slick™ lining further eases tank unloading.

HDD Vacuum Excavators run continuously.

We know the meaning of minimum downtime; therefore we value your time. So, when your living depends on continuous operation, contractors choose Vector vacuum systems. We avoid features that “sound good,” but do not apply to the real world job-site. We spend our money on the features that provide quick payback.

DELIVERING MORE EFFICIENCY, FLEXIBILITY AND POWER
