

Vector Self-Dumping Hoppers and Drum Fillers

Vector offers a wide range of High Efficiency Cyclones, Separators, Drum Fillers, Self-dumping hoppers and Other Specialized Intermediate Separators. All of these intermediate systems provide excellent separation and if used for vacuuming dry bulk materials each will capture the majority of all “heavy” materials. Drum fillers provide the ability to vacuum directly into 55-gallon drums for added convenience. Often used for specialized clean up of products that you do not want to enter the vacuum, including sludge and similar gummy or noxious materials. Drum fillers are often used when it is difficult to change drums at the vacuum source due to space considerations. They are available in several configurations including with or without stands, replaceable wear sections or bin monitor sensors.

**VEC Drum Filler with replaceable wear sections.
The stand features Cam Action head-lift mechanism.
For excellent separation with 55-gallon or ½ drums.**

Economy Drum Filler in Steel or Aluminum

Self-dumping one, two or four yd³ hoppers provide additional storage or for clean up of bulk products that the user does not want entering the vacuum. The self-dumping feature provides ease of handling for discharging into dump trucks, lugger boxes, and other collection or transport devices.

One cubic Yd Self-Dumping Hopper with Optional Wheels

Spartan II vacuum with 2 cubic yard hopper.
