Experience Dust Free Roofing Rock Removal! Prepare Roof Surface for Spray Foam and other Special Needs!

For roofing systems that require extra cleanliness or complete dust removal including spray foam, primers or cold applied resaturants, the WetHead is the tool for you. Using a Vector Technologies Wethead in combination with your VecLoader Vacuum provides an ultra-clean surface to which your roofing product can be applied.

WetHead® vacuuming is a process of combining high-pressure water washing with concurrent vacuuming to clean roof and other surfaces. The WetHead utilizes a patented surface cleaning apparatus to clean surfaces having both coarse and fine compacted particulate.

This is how the system works--

- Set-up your vacuum as directed in the Vector operating manual.
- Lead the high-pressure water line (1,000 - 2,000 PSI) from the WetHead power module to the work area.
- Remove ballast with the vacuum tool of choice.
- Connect the WetHead nozzle to the vacuum line.
- Connect the high-pressure water line to the WetHead nozzle.
- Clean the deck with the WetHead nozzle.
